

NEXO is universally recognised as a leading name in loudspeaker innovation and manufacture and have appointed Batmink Ltd as an official sub-distributor for the UK. Offering a range of professional audio equipment suitable for most applications, NEXO is the ideal choice for industry professionals who demand the highest quality.

The NEXO PS R2 Series

DEMONSTRATIONS

We are happy to arrange demonstrations for any of the NEXO product range, either in our showrooms or on-site at your convenience.

PS8-R2 Loudspeaker, LS400-R2 Sub Bass & PS8 TD-R2 Controller

The PS8 Loudspeaker features advanced NEXO designed low magnetic emission Neodymium drivers, making the PS8 extremely light and compact while usable next to magnetically-sensitive professional video or computer equipment.

The LS400 Sub-Bass extends the usable range of the PS8 Loudspeaker to 40Hz, providing high performance and high power output (131dB Peak) in an extremely compact, light weight package.

The PS8 TD Controller is an advanced analogue processor that allows the PS8 Loudspeaker and optional LS400 Subwoofer to achieve superior performance from an exceptionally small format.

PS10-R2 Loudspeaker, LS600-R2 Sub Bass & PS10 TD-R2 Controller

The new PS10-R2 Loudspeaker can be safely driven with up to 1250 Watts of amplifier power, yet it is only half the weight and volume of common trapezoidal systems. The dispersion, architecture and weight balance of the PS10-R2 are designed to provide both exceptional PA and stage monitor performance from a single product without compromise.

The new LS600 Sub-Bass extends the usable range of the PS10-R2 Loudspeaker to 38Hz, providing exceptional performance and high power output (138dB Peak).

The PS10TD-R2 provides crossover, sensed amplifier control and system equalisation optimised for the PS10R2 and LS600. One PS10TD-R2 has two inputs and three outputs, L, R and summed sub out, minimising installation cost and complexity.

PS15-R2 Loudspeaker & PS15 TD-R2 Controller

World class performance from the new PS15-R2 Loudspeaker – designed to provide both exceptional PA and stage monitor performance from a single product. The PS15-R2 can be driven with up to 2000 Watts of amplifier power.

Like all NEXO processors, the PS15TD-R2 provides precision dynamic, voice coil temperature and diaphragm displacement protection through the use of selective Voltage Controlled Equalisers (VCEQs), reducing levels only at frequencies when and where necessary.

RAY SUB Loudspeakers

The RS15 is the first product to feature NEXO's patent-pending RAY SUB Technology. Comprising a 15 inch transducer with a frequency response of 35Hz – 200Hz in omni or 35Hz- 150Hz in directional mode and a sensitivity of 105db SPL, the RS 15 presents an unchallenged versatility for installation and touring requirements.

Extending NEXO's offering of the patent pending RAY SUB design, the RS18 is the second product to feature this technology. The RS18 sets a new standard for performance and versatility capabilities that 2x18" sub bass cabinets can provide.

The GEO S12 Line Array

info@batmink.co.uk

The GEO S1230 and GEO S1210, are NEXO's newest additions to the internationally successful GEO S Series of tangent-array loudspeakers, designed for both fixed and portable installations where high-performance cost-efficient foreground reinforcement is required.

Paired with NEXO's proprietary design software GEOSoft2, the new building blocks in the scalable GEO S Series offer absolute predictability, and full integration potential with EtherSound networks. Although the new cabinets are aimed principally at the design and installation market – outdoors in stadia and arenas, indoors in nightclubs and live venues – they also offer mobile deployment options to PA companies, opening up new possibilities for the GEO S Series.

The NXAmp Series

Batmink is one of the UK's largest distributors of professional sound and lighting equipment, supplying products from over 100 leading manufacturers.

Why not contact the sales team to discuss your requirements?

Proprietary electronic processing has been an integral element of every NEXO sound reinforcement system for over a decade. NEXO engineers realised long ago that intelligent real-time management of critical operating parameters could deliver the same kind of performance benefits to the loudspeaker system that computer control has brought to the automobile drive train. NEXO TD controllers provide crossover, sensed amplifier control and system alignment acoustically matched to each component in NEXO PS, Alpha, AlphaE and GEO systems.

The NXAMPS & NX242's use complex digital software algorithms to combine calibrated data with sensed voltage and current measurements, precisely controlling the temperature and displacement of each driver. This ensures that all NEXO systems deliver optimum sonic performance.
